

My Pizzeria App Study

Pallas Do

Project overview

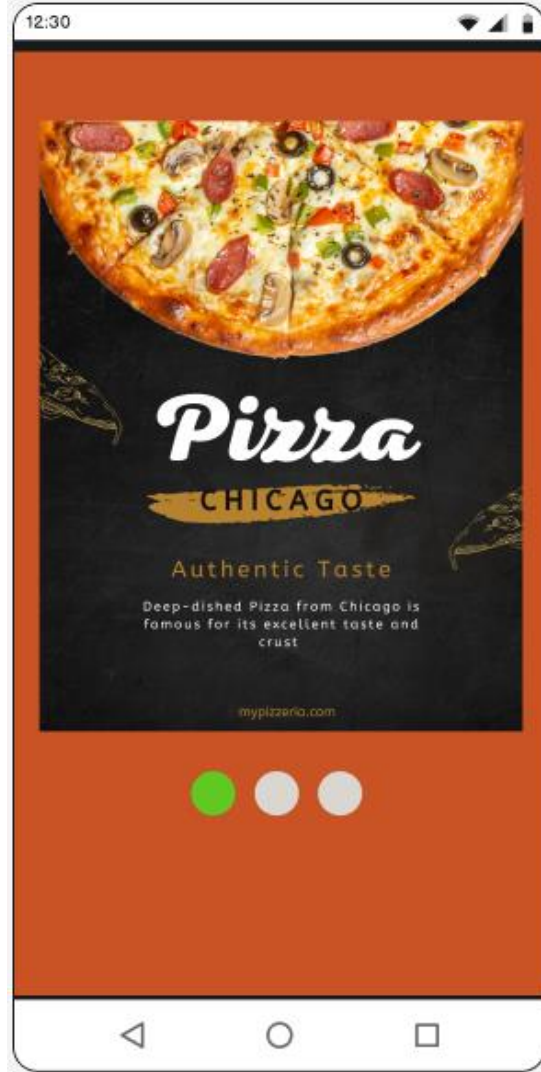

The product:

A Mobile app for My Pizzeria

Project duration:

April 3th-April 14th

Project overview

The problem:

Insert one to two sentences about the problem(s) you were trying to solve.

The goal:

Insert one to two sentences about the goal of the project.

Project overview

My role:

I am currently the UX Designer for My Pizzeria

Responsibilities:

My work is to research and build a high-fi wireframe for My Pizzeria

Understanding the user

- User research
- Personas
- Problem statements
- User journey maps

User research: summary

- We are creating My Pizzeria mobile app to help people order food from My Pizzeria, so that they can visualize and effectively order their food. They want to make sure the correctness of their order to reduce complaints and increase return customers. The research goals is to figure out if the visualization really helps user understand what the food they will order look like

User research: pain points

1

**Cannot see how the
pizza is customized
before buying**

Current offering does
not reflect what is
actually ordered

2

**No customization
for party**

The food does not
reflect party
optimization

3

**No customization
for kids**

Users have kids but no
option for kid-friendly

4

More pickup options

The current offerings
lack of pickup

Persona: **Andy**

Problem statement:

Andy is a fast-paced and careful customer who needs to see visualization of the food before ordering because Current offerings do not reflect the actual order

Andy (Anh Bui)

Age: 25

Education: Bachelor Degree

Hometown: Ho Chi Minh

Family: Single

Occupation: Front-end Developer

“Fast and furious, but must be correct ”

Goals

- Want to have an user-friendly app that can help visualize the order before ordering

Frustrations

- Current offerings do not reflect the actual order
- The ordered pizza is different than what he ordered

Andy is working in a foreign tech startup company, and always busy with work. Since he used to study abroad, he likes pizza because it is fast and delicious. However, pizza companies do not satisfy him due to the order does not reflect the actual pizza he received. He wants to have good visualization to make better order and maintain his expectation.

Persona: **Huyen**

Problem statement:

Huyen is a kid lover who needs to see kid-friendly and party-customization option because current offerings do not have that.

Huyen

Age: 35

Education: High School

Hometown: Hanoi

Family: 3

Occupation: Online business woman

“For my kids to have quality food”

Goals

- Have kids-friendly option for her kids to also pick order
- Have option for partying since she also wants her friends to come over to eat with

Frustrations

- No kids-friendly option
- No customization for party

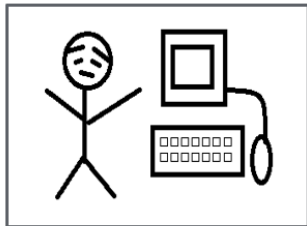

Huyen is a single mother of two kids. Her work is mainly reselling products. She is also a busy person, so sometimes she can ask her kids to order themselves too. Sometimes her friends come over to eat, but the food does not reflect the party atmosphere.

User Journey Map

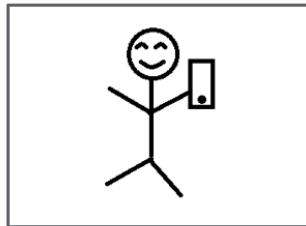

Goal: What he orders is what he saw in the app

ACTION	Access the homepage	Go to Menu	Go to Food Ordering	Checkout	Order processed
TASK LIST	Tasks A. Choose to register/ guest B. Choose layout/texture largeness C. Go to homepage	Tasks A. Choose form of delivery B. Choose the taste of their choices C.Choose the purpose to buy	Tasks A. Choose types of Pizza/Combo B. Choose size C. Choose types of crust D. Choose add-ons (starter/drink E. Note on allergies F. Visualization G. Add to Cart	Tasks A. View basket B. Change address C. Delivery time option D. Payment	Tasks A. Check if delivery is processed B. Get the order
EMOTIONS					
IMPROVEMENT OPPORTUNITIES	Faster loading	Customize the menu based on their taste and purposes	Customize the choices Enhance visualization before they click ok	Faster checkout	Automate and show status delivery real-time

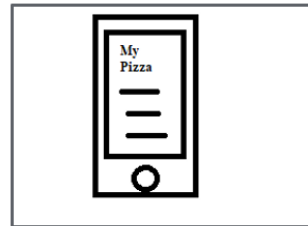

Paper wireframes

Andy stays late for work and going through different pizza apps. No preview order was found.

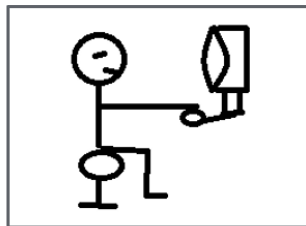

Andy suddenly remembers an app that can support

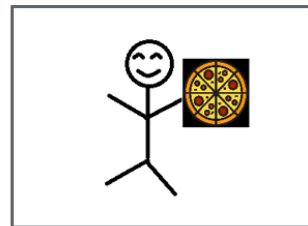

Andy uses My Pizza to order the app

Andy can check out the visualization of the pizza before buying

Andy orders and keeps on working

Andy receives the pizza that looks like his order

Digital wireframes

To do a research on whether the design fits with customer's need

The image changes with the change in option

← Customize your order

ABC Pizza
Lorem ipsum Lorem ipsum Lorem ipsum Lorem

Choose the crust required

☒ Thick 0d

☐ Thick 0d

Topping

☐ Thick 0d

☐ Thick 0d

Dipping sauce

☐ Thick 0d

☐ Thick 0d

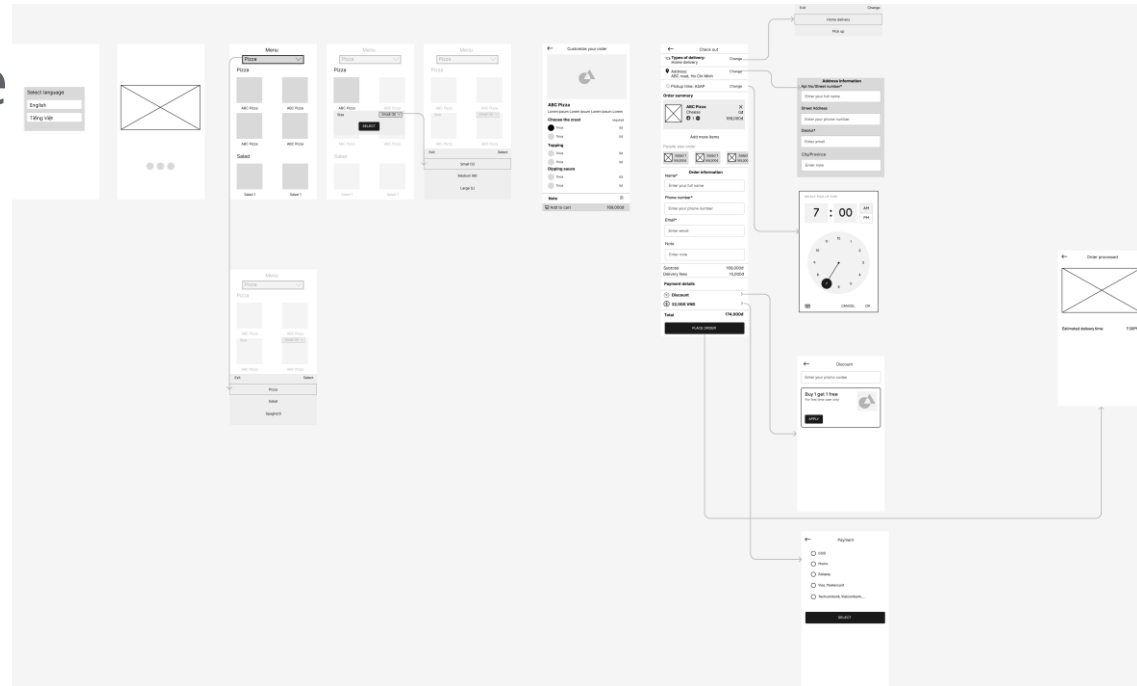

Note 

 Add to cart 169,000d

User can choose crust, topping or dipping sauce.

Low-fidelity prototype

Usability study: findings

Write a short introduction to the usability studies you conducted and your findings.

Round 1 findings

- 1 People want to see changes in the order image when they change the order
- 2 People want to add more than 2 items before checking out
- 3 People want to add more pickup flows

Round 2 findings

- 1 Add more kid-friendly option
- 2 Add more party option

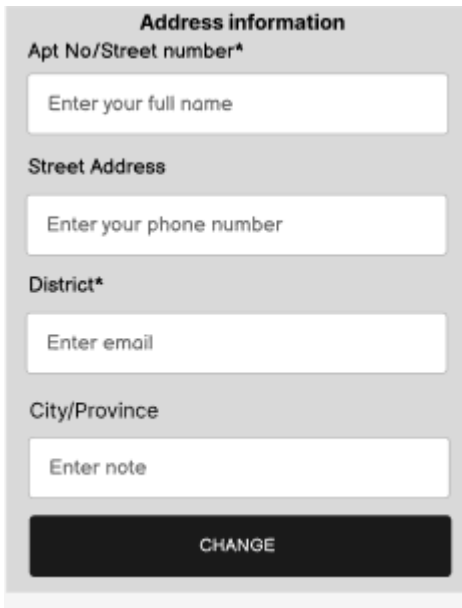

Refining the design

- Mockups
- High-fidelity prototype
- Accessibility

Mockups

[Your notes about goals
and thought process]

Before usability study

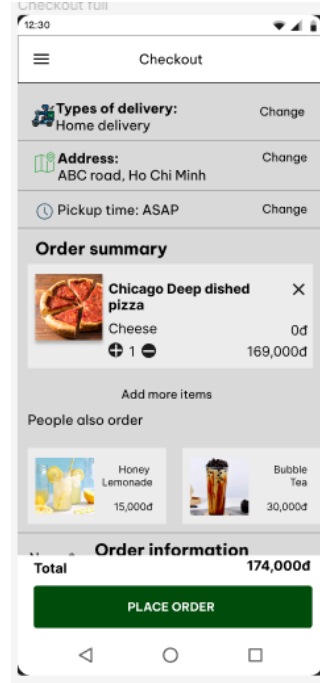

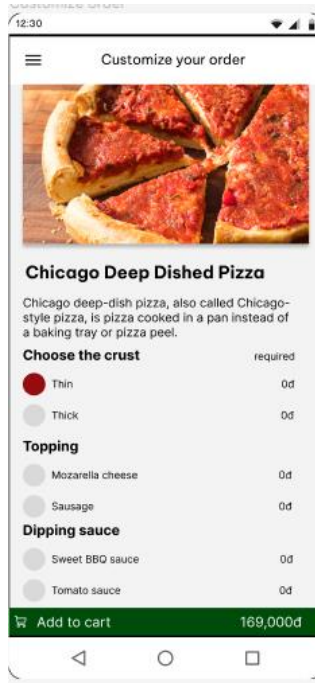

A mockup of a mobile application interface for address information. It features a grey header with the title "Address information". Below the header are five input fields: "Apt No/Street number*", "Enter your full name", "Street Address", "Enter your phone number", "District*", "Enter email", "City/Province", and "Enter note". A black button labeled "CHANGE" is positioned at the bottom of the form.

After usability study

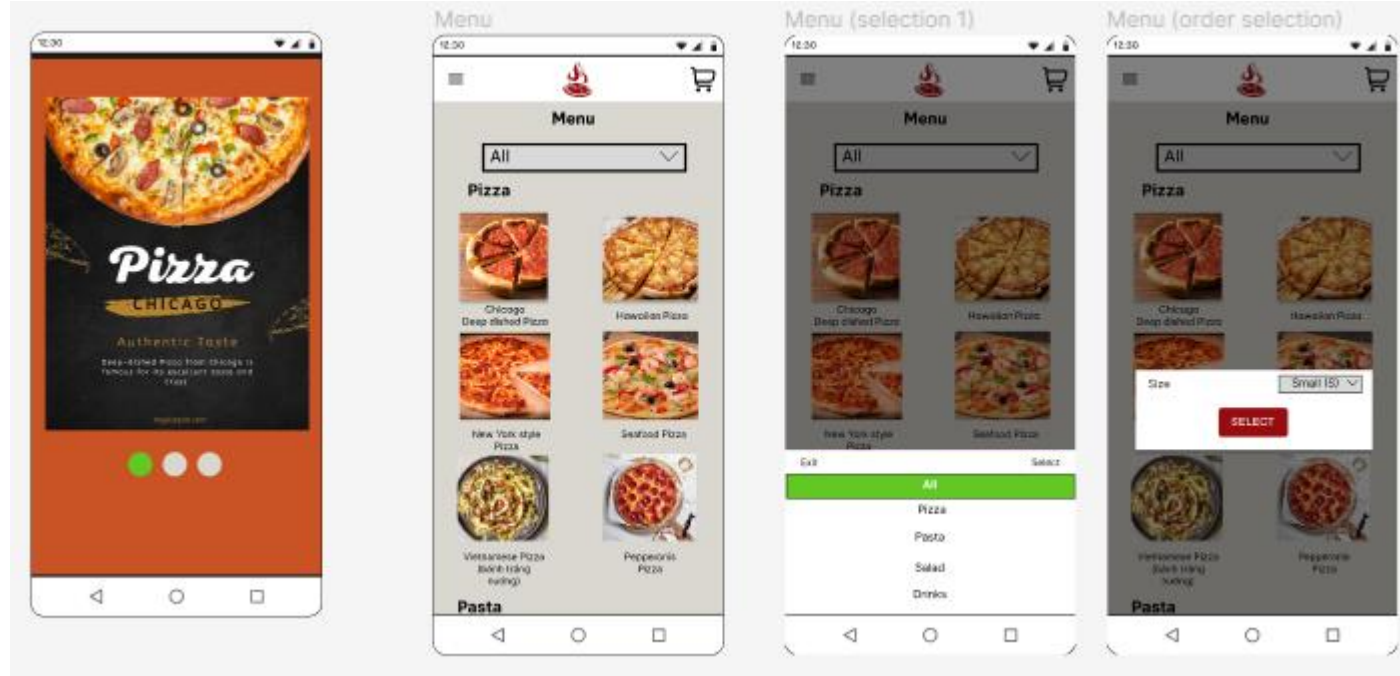

Mockups

High-fidelity prototype

<https://www.figma.com/proto/CT0Ghew0ezPs5knVX2gpmB/High-fi-wireframe?page-id=2%3A2&node-id=18-3657&viewport=613%2C336%2C0.18&scaling=min-zoom&starting-point-node-id=18%3A3657&show-proto-sidebar=1>

Accessibility considerations

1

Allow zooming in and out

2

Will include talk options

3

Insert one to two sentence summaries describing each accessibility consideration applied in your designs.

Going forward

- Takeaways
- Next steps

Takeaways

Impact:

This app will be calculated on impact when the app is fully developed

What I learned:

UX Research helps on changing to appropriate design and improve user experience

Next steps

1

Finish the prototype for menu bar items and may do some color change

2

Create user stories and roadmap to build this app

3

Develop this app
